Disasters:**Declaration Number****Disaster Damage:**

On Wednesday, August 29, 2012, Hurricane Isaac made landfall on the Louisiana Coast as a Category 1 Hurricane causing substantial and widespread wind damage and flooding in the City of New Orleans, leaving the majority of the city's residents, businesses, and streets without electrical power for days. The storm stalled over Southern Louisiana over a 48-hour period, at times moving as slowly as 6 miles per hour.

During the storm high winds and continuous rainfall produced by Hurricane Isaac caused significant damage to the City of New Orleans. The hurricane force winds downed power lines, trees, and light poles, and created massive disaster related debris within the City's rights of way. Storm surges caused serious damages to facilities and infrastructure located outside of the City's levee protection systems.

Recovery Needs:

Hurricane Isaac was primarily a slow moving, heavy rain and high wind event. As a result, substantial costs were incurred in repairing damage to the City's drainage system, which had been clogged with debris from the storm, removing debris from roadways and public areas, collecting debris from private

property, repairing water damage to public buildings, restoring street signals and street lights, and performing other repair and cleanup activities.

These activities were undertaken with the assistance of the Federal Emergency Management Agency (FEMA) which assisted in assessing damage and providing funding to begin the recovery process. Therefore, the bulk of the funds subject to this Action Plan will be utilized to meet the City's cost share responsibilities to FEMA, to reimburse the City for eligible expenses of storm recovery, and to complete the activities that were not fully funded by FEMA.

The City took actions to provide temporary housing to persons displaced by Hurricane Isaac. In addition, the City's housing officials conducted field visits and site visits of assisted housing units across the City and found no significant damage.

The City obtained from HUD, FEMA, and the State of Louisiana additional data for estimates of damage to Owner Occupied Housing and Rental Units. That information confirmed the field inspections conducted by the City after the Hurricane. The vast majority of the damage to owner occupied properties was minor – 92% of the Owner Occupied Housing had losses that averaged \$687.00.

In an effort to utilize the scarce resources available for housing activities, the City has implemented a comprehensive approach to improving substandard housing, particularly those units damaged by declared disasters. To that end, the City works with its stakeholders to identify both disaster and also non-disaster federal, state, corporate, and nonprofi

Recovery Needs:

t funding sources available to assist residents in their recovery efforts.

In December 2012, the City issued a Request for Proposals to award HOME funds for eligible activities including rehabilitation of substandard occupied rental properties. None of the applications identified

Hurricane Isaac as a factor in the need for rehabilitation funding.

Recently the City awarded nearly \$5 million of its HOME allocation to not-for-profit organizations who perform Owner Occupied Rehabilitation programs. These organizations assist low-income homeowners who either are displaced because they do not have sufficient resources to complete repairs to their homes or are living in substandard conditions because they do not have the financial resources to undertake repairs to their homes. These organizations will prioritize low-income homeowners who are unable to return to their homes because of damage caused by disasters including Hurricane Isaac.

These organizations received funding based upon performance under prior contracts and have demonstrated the capacity to manage these funds, to complete rehabilitation of homes, and to serve those households with the greatest need.

Most Impacted and Distressed Threshold (Projected):	\$0.00	\$0.00

Overall Progress Narrative:
The City of New Orleans has continued to focus on the implementation of the Round 2 activities during this quarter. Construction of the DPW Maintenance Administration Building is scheduled for completion in September 2018. Round 2 (Phase I) of the Drainage Point Repairs should be completed during the third quarter. At the end of the second quarter, 87% of the Phase I locations

have been repaired and restoration has been completed at 58% of the repaired locations. In addition, repairs to the damaged drain lines identified during the CCTV inspections is currently in progress. The start of the procurement process for the Round 2 Phase II locations is scheduled to begin during the next quarter. Funds requested this quarter were for the following Round 2 expenses: DPW Maintenance Administration Building - \$249, 055.02 (Construction); Drainage Point Repairs - \$1,305,944.23 - (Construction); and Drainage Point Repairs - \$320.66 (Geotechnical Services).

Additional funds were submitted for repayment during this quarter. The total funds repaid by the City of New Orleans now totals \$1,917,306.00

Activity Description:

The City of New Orleans will use a Disaster Recovery Analyst in conjunction with the project manager to ensure that all documentation for the Isaac program is filed correctly (both electronic and hard

copies), to input information into DRGR in a timely and appropriate fashion in order to comply with federal regulations and drawdown funds.

Other expenses include travel and training for the PM and DR Analyst. In order to spend CDBG Funds, all activities must be environmentally cleared prior to spending the funds. Expenses were incurred as a result of this ERR process. The use of the grant management team, Jacobs CSRS, was needed to help identify the proper documentation needed to draw down CDBG grant funds.

Activity Description:

The City of New Orleans will use a project manager to directly manage and deliver all Hurricane Isaac projects as outlined in the City's action plan. Major tasks will include meetings with A/E to provide design guidance on City Standards/Specifications, perform routine site visits to ensure contractors are performing adequately and following City standards, process invoices and all project paperwork needed to implement a project from start to closeout, etc.

Activity Description:

With the assistance of local 311 records (the City's non-emergency phone center), cleaning of catch basins and associated drain lines took place throughout the City to ensure that all Isaac-related debris was removed to prevent any impacts of future flooding from a major rain event. Typically, the use of equipment for vacuuming and water jetting the catch basins/drain lines was used to provide the necessary cleaning required, unclogging the basin/drain line.

Location Description:

The cleaning of the catch basins and drain lines focused primarily in low to moderate income neighborhoods/zones throughout the entire City. See supporting documents for maps showing exact locations of all cleanings, including those cleaned in LMI areas. By cleaning in areas City-wide, this provided an adequate cleaning of the overall drainage network lowering the risk for potential flooding in future rain events.

Activity Progress Narrative:

There were no activities or expenditures to report for this activity. All funds budgeted have been expended.

Activity Description:

Due to the high winds of Hurricane Isaac, several private residential structures sustained damage to an extent that they became Imminent Dangers of Collapse (IDC) and were an immediate threat to the public. The City of New Orleans is responsible for eliminating these public threats by demolishing the structures declared as IDCs. Following Hurricane Isaac, The City of New Orleans determined that 41 structures were IDCs and will have them all demolished. A total of 32 structures have been demolished to date in this category.

Location Description:

The location of the residential structures deemed IDC were selcted based on the most imminent danger to the public and safety. They are located throughout the City. Please see supporting documentation for addresses.

LMI%: 54.63

Activity Description:

The City has located 167 damaged drain lines throughout the City that will require point repairs. The poor condition of these drainage points was exacerbated by Hurricane Isaac. These drain lines are the primary way that the City fights flooding. Damaged drain lines compromise the integrity of the City's storm water drainage system by preventing water from draining as designed, causing

unnecessary flooding and allowing storm water to infiltrate into the roadway foundation, creating sinkholes and undermining the structural integrity of the roadway and damaging water, sewer, and other underground utility lines. These repairs will restore drainage system capacity and repair damaged roadway foundations in the area of the drain line failure to reduce the potential of the type of flooding that was experienced during Hurricane Isaac. These repairs will allow storm water to drain off streets quicker in future storms and reduce flooding. They will prevent future damage to roadways, waterlines, and sewer lines due to settlement and erosion from water leaks in the drain lines.

A properly sized and functioning storm water drainage system is essential to the protection of the public, property, and infrastructure of any metropolitan area. This is especially true in the City of New Orleans, where a significant portion of the city is at or below sea level. This topography presents a unique challenge for storm water drainage.

The City's storm water drainage system is one of the most extensive and complex systems in existence. It consists of approximately 117,770 drainage manholes, catch basins, and inlets, 2,700 miles of underground drainage pipes and canals, 90 miles of open canals, 13 underpass pumping stations, and 22 drainage pumping stations. When it rains, the system is designed to drain an inch of rainfall off the streets in the first hour, and then an additional half-inch of rainfall each additional hour. Rain fall is intended to drain off the streets along curbs gutters and open ditches into catch basins which flow into small drainage pipes that are less than 18 inches in diameter. The small drainage pipes drain the water into larger drainage pipes and canals which take the water to pumping stations. There are two West Bank pumping stations and two stations in Eastern New Orleans that pump rainwater into the Intracoastal Waterway and the Industrial Canal.

Damage to the catch basins and/or small drainage pipes that are designed to drain rainwater off neighborhood streets and into larger drainage pipes and canals so that it can be pumped out of the City has been identified in 167 locations city-wide. This damage consists of cracked, partially collapsed, or fully collapsed drainage pipes and/or catch basins. This damage prevents water in these areas from draining as rapidly as possible, causing unnecessary and prolonged flooding of streets and property. In the underground drainage pipes themselves, cracks in the pipes allow water to seep out into the foundation of the roadway, causing it to weaken and erode, creating voids underneath the roadways and eventually causing sinkholes to form and/or other catastrophic damage to occur. On the surface, damaged drainage pipes can cause cracks in the pavement and settlement in the pavement and on property adjacent to roadways. Underneath the surface, water from damaged drainage pipes can undermine and cause leaks to water lines, sewer lines, and underground utilities. Significant amounts of rainfall such as those experienced during Hurricane Isaac and other storm events cause existing cracks and other damage to the drainage pipes to become much worse. If these drainage pipe repairs are not completed now, another hurricane or storm could cause additional unnecessary flooding of streets and property damage. As the likelihood of increased flooding and damages becomes greater, and the more the cost of needed repairs increases, the longer these repairs are delayed.

Each location with a damaged drainage pipe or catch basin will be assessed to determine what repairs need to be made in order to ensure the catch basin and/or drainage pipe is fully functional so that it can drain water as designed. The majority of the repairs will require the damaged section of drainage pipe to be dug up and removed, and a new drainage pipe to be installed in its place. Once this is complete, the roadway foundation will be rebuilt and new pavement will be placed over the area. When possible, the work underground will be completed prior to any planned repaving of the roadway as part of the City's capital improvement construction program. And, as with the catch basin cleaning above, any problem in the drainage capacity and proper operation affect the entire City's infrastructure, thereby meeting the LMI national objective.

Location Description:

The City of New Orleans will be making point repairs to the drainage system city wide. Based on 311 calls/logs, the Department of Public Works has compiled a list of 523 known drainage issues that will use this funding to make the necessary repairs. Repairs will be made equally throughout the five council districts (A-E).

Match Contributed:	\$0.00	\$0.00

Activity Description:
Immediately following Hurricane Isaac, contractors removed several cubic yards of debris from the

public right of way. This debris, consisting of vegetative material, loose construction materials, spoiled or damaged household goods, marsh grass and mud, was a threat to the health and safety of the citizens of New Orleans and was expeditiously removed in order to eliminate the danger. Although the City performed a lot of this work itself, it also had to procure and engage debris removal contractors and debris monitoring experts to perform the massive debris removal program.

Location Description:

Debris removal/monitoring took place city-wide to remove debris caused by Hurricane Isaac. In general, the contractor removed debris from the public right of way including roadways and parks. The amount of debris totaled over 200,000 cubic yards.

Activity Progress Narrative:

There was no activity to report for this quarter. All funds budgeted have been expended.

Activity Description:

The City of New Orleans provided force account labor to keep the citizens and the City's assets safe during and immediately after the storm. The City's emergency personnel performed safety patrols, responded to hurricane related emergency scenarios, helped citizens in need to find shelter, and performed other emergency response duties.

Location Description:

The City of New Orleans provided force account labor including but not limited to the Police Department and Fire Department to prepare and respond accordingly to the public need both during and after Hurricane Isaac. Public assistance was given city wide to protect both the citizens and the City's assets during and following Hurricane Isaac.

Activity Progress Narrative:

There were no activities or expenditures to report for this quarter.

Activity Description:

During Hurricane Isaac, electrical power was lost for 13 days with intermittent service between. The power loss caused the building temperature and humidity to exceed levels required to maintain art objects. Rain water caused water to seep through cracks in the basement slab floor and wind driven rain penetrated the roofs and windows. The water damaged carpet, vinyl cove molding and drywall at multiple locations. Mold also began to form. The contractor provided generators for temporary electric power, containment of affected areas, water extraction, dehumidifiers, and air handlers, provided mold remediation, and replaced drywall and carpet in several rooms of the building.

Location Description:

The NOMA building located at 1 Collins Diboll Circle, New Orleans, LA 70124 was damaged due to high winds and rain caused by Hurricane Isaac.

Activity Description:

The City has located 167 damanged drain lines throughout the City that will require point repairs. Damaged drain lines compromise the integrity of the City's storm water drainage system by proventing water from draining as designed.

Location Description:

Activity Progress Narrative:

Repairs to drainage lines, restoration of the repair sites and CCTV inspections were ongoing during this quarter. The CCTV inspections revealed additional sites in need of repair. Change Order No. 1 was approved to provide funds and time to repair and restore the additional sites identified. Completion of the first phase of the Round 2 drainage point repairs should be completed during the third quarter.
