NEW CONSTRUCTION FOR GEORGE WASHINGTON CARVER HIGH SCHOOL 3059 Higgins Boulevard New Orleans, LA 70126

The project being presented is the resubmittals from the previous DAC Submittal for Schematic Design Phase to completely replace George Washington Carver High School which was destroyed as a result of Hurricane Katrina. Please note that this facility was previously presented to DAC but, is being redesigned due to cost overruns. The building Owner's intent is to change the building design as little as possible with the exception of combining the original Auditorium and the Gymnasium into one building which will now be called a Convocation Center and simplify the use of multiple exterior materials.

The revised project will be designed in two phases and by different design firms since this will be a Design-Build Project. Phase 1 is being designed by the joint venture team of VergesRome Architects-Fanning Howey – A Joint Venture (VRA+FH) and will be known as the Bridging Architects. VRAFH is currently designing the project through Schematic Design. This submission to DAC by VergesRome Architects+Fanning Howey – A Joint Venture is the first step in familiarizing DAC with this revised project and mainly to start an appeal process to allow this project to place parking in front of the building and to allow the parking on the side of the building to be located in the area between the street and the front line of the building facing the street. The final design, Phase 2, will be by a Design Build Team (currently unknown); DAC may elect to require additional submittals from the Design Build Team to comment on the final building design. The previous project submission to DAC had parking in the same locations shown on the VRA+FH submission but, the zoning has since changed for Residential areas to not allow parking in these areas.

The site for GW Carver High School is centrally located in the Upper 9<sup>th</sup> Ward and is a key component of the Desire Neighborhood. The site is bounded to the north by Interstate 10 and Almonaster Avenue. Higgins Boulevard is to the south of the site and will be the street used for the main entrance into the site. Immediately to the west of the site is St. Ferdinand Street with Almonaster Avenue just further west. Immediately to the east of the site is Metropolitan Street with Louisa Street just further east; houses facing Metropolitan Street back up to the east side of the site.

All previous structures have been completely removed from the site. The new GW Carver High School is currently planned to be approximately 180,000 square feet. It will consist of two separate buildings, a two story Academic Building and a two story Convocation Center Building. The two buildings will have a connecting corridor. The Academic Building is in the shape of an "H". At the

Local Experience. National Resources.

center of the "H" is a central open courtyard and is flanked by the media center on the east and the student dining commons on the west. This location affords these spaces with extensive natural lighting and views across the campus. They are essential community spaces which help connect the academic wings. Seven academic wings allow for a number of classroom grouping options. The science labs are located between each pair of academic wings so that they can share resources while also integrating into the academic teams. The teacher centers, student restrooms and other support spaces are located at the major north/south corridor intersections. Special Education spaces are distributed throughout each floor of the building to support integration into the academic wings. An eighth wing provides building support spaces (i.e. kitchen, serving areas, primary mechanical spaces, electrical, etc.)

At the northwest corner of the "H" a corridor connects to the Convocation Center. The Convocation Center will serve the school as both the auditorium and gymnasium. The main and central convocation space is surrounded by other program areas which have a direct relationship to the center. They include the performing arts/music spaces and the physical education spaces.

The Academic Building and the Convocation Center Building will be primarily clad with a light wheat color brick which was previously presented and approved by both the Community and the DAC. Windows will be aluminum and glass.

The site is currently empty except for three 40 to 50 year old live oak trees. There is a forth oak tree which is completely dead and will be removed. The new GW Carver High School facility has been placed on the site in a manner where all three existing live oak trees can remain. Additional landscaping is being added to meet the current requirements of Parks and Parkways. Note that relocation of the building to move the building towards Higgins will require the removal of at least two if not all three existing oak trees. Relocation of the facility to the west will eliminate at least two of the existing oak trees. The facility is currently located only 50 feet away from the houses backing up to the east side of the site and any relocation of the facility further east will overshadow those residences; by code the buildings can be as close as 25 feet from the east property line. Relocating parking to locations required by current zoning in Residential areas will waste valuable areas that are planned for ball fields and playground spaces and possible future building expansion to the rear of the buildings.

Additional planting has not been included, at this time, in the front of the building since FEMA will not pay for Landscaping.

VergesRome Architects – Fanning Howey – A Joint Venture Sincerely,

David Glen Reed, A.I.A.; NCARB
