

# ORLEANS PARISH JAIL POPULATION:

## By the numbers

### February 2025

Produced by the Mayor's Office of Criminal Justice Coordination

---

#### Summary

##### Purpose

This report aims to address the question, "Who was detained in OJC last month?" To that end, the report presents information about average daily jail population, admissions, and releases in the last month

---

##### Data sources

The data behind the graphics comes from the **Orleans Parish Sheriff's Office** via the OCJC Data Warehouse. OCJC undertakes additional data processing to better enable tabulations and analyses.

---

##### Questions? Contact us!

At OCJC, we are interested in your observations and data questions.

Please reach out to [adrienne.tobler@nola.gov](mailto:adrienne.tobler@nola.gov) to further discuss the possibility of exploring your questions. For more definitions of the terms used in this report, please see our [glossary](#).

For technical questions, contact [theresa.mckinney@nola.gov](mailto:theresa.mckinney@nola.gov)

A glossary of terms used in the report is available [here](#).

On average, **1,467** people were detained in the jail each day in February 2025, a 2.7% decrease from January's average daily population of 1,507 people.

The average daily jail population in February was **18.8% higher** than the February 2024 average of 1,234 people.

688 people were admitted to the jail in February, **9.7% higher** than jail admissions compared with January, when 627 people were admitted to the jail.

833 people were released from the jail in February 2025, **an increase in jail releases of 33.1%** compared with January, when 626 people were released from jail.

The average length of jail stays for the 626 released in February was **65 days**, 7 days longer than the average jail stay in January.

The jail detention rate for Orleans Parish was 402.8, and the jail admission rate was 188.9 detainees, per 100,000 parish residents.

Racial disparities persist in jail detention and admission.

- Black people are detained in the jail at **4.8** times the rate of white people, per 100,000 parish residents by race.
- Black people are admitted to the jail at **2.2** times the rate of white people, per 100,000 parish residents by race.

## FEBRUARY 2025 JAIL POPULATION

### DAILY JAIL POPULATION

On average, the jail population in February 2025 decreased daily by 0.35%. Comparing the first and last days of the month, the jail population decreased by 9.1%, from 1,506 people on 1 February to 1,369 people on 28 February.

The jail population reached its monthly peak on the first day of the month and was at its lowest on the last day of the month.

Figure 1. February 2025 daily jail population by legal status (open matters, sentenced); daily admissions; and daily releases.

Note that, by “open matters,” we’re referring to people whose cases have not yet reached a final disposition or those who were admitted to the jail on warrants or detainers only. “Sentenced” refers to detained people whose cases have reached a final disposition and who are awaiting transport to a DOC facility or to the Eastern Louisiana Mental Health System. Please see the glossary of terms in Appendix B.

## AVERAGE DAILY JAIL POPULATION

On average, 1,467 people were detained in the jail daily in February 2025 (standard dev. = 35.7). The average daily jail population decreased by 2.7% in February compared with January, when the average population was 1,507 people.

While the average daily jail population has increased by 1.3%, on average, from February 2024 to February 2025, February's average is 18.8% higher than the February 2024 average of 1,234 people.

Figure 2. Average daily jail population by month; month-to-month percentage change in average population; total monthly jail admissions; total monthly jail releases; and 7-day average turnover rate, February 2024 - February 2025

The average 7-day turnover rate for February was 26%, 7 percentage points higher than the average turnover rate for January. Developed by the Bureau of Justice Statistics (BJS), the turnover rate measures the flow of people into and out of the jail. On average, over 1 in 4 people detained in February had been newly admitted or were about to be released. In 2022, BJS reported a [31% national turnover rate for jails of our size](#).

On average, over 93% of those detained in the jail in February (about 1,372 people daily) were in custody for “open matters” – that is, their state or municipal cases had not yet reached a final disposition, or they had been admitted to the jail only on warrants or probation/parole detainers. Over 6% of people detained in the jail (about 90 people, on average, daily) were in custody having been sentenced; their cases have been “closed”, and they were awaiting transport to a DOC facility (about 55 people daily, on average) or to the Eastern Louisiana Mental Health System (about 35 people, on average each day in February).

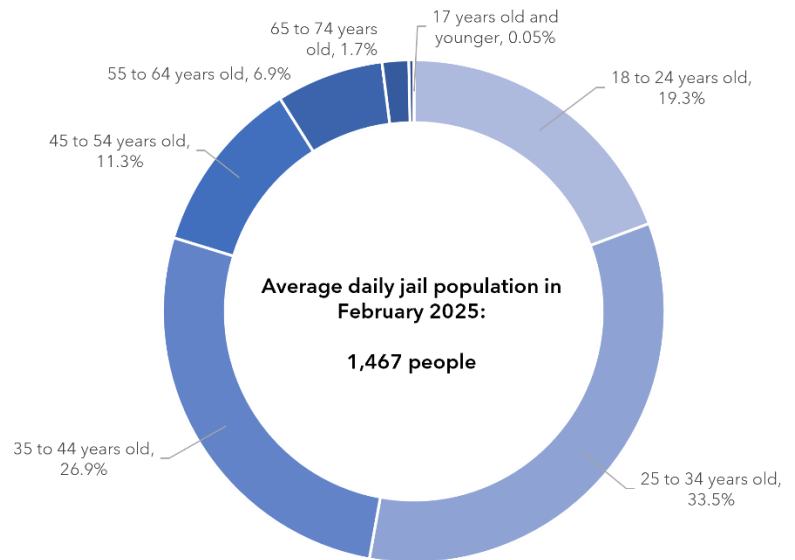

*Figure 3. February 2025 average daily jail population by most serious charge at booking for detainees with open cases. Note that, on average, people detained on open misdemeanor sex, weapons, and drug offenses made up less than 1% of the average jail population combined. About 7 people (0.5% of the average population) were in custody daily on other matters.*

Over 86% of the average daily jail population in February comprised people in custody for open felony charges, and nearly 3%, people with open state misdemeanor charges. 55% of those detained, on average, were in custody for an open violent offense as the most serious charge at booking (about 808 people, on average, daily). (See Table 1, Appendix A).

On average, over 9 out of 10 people in jail custody in February were between the ages of 18 and 54 years at the end of the month. Youths aged 17 years or younger made up 0.05% of the average daily population in February (about 1 young person, on average, daily).

Figure 4 (at right). February 2025 average daily jail population by age ranges. Note that people aged 75 years or older comprised 0.3% of the average population.

New Orleans is a majority-Black city, yet African Americans are overrepresented in the average jail population. Black/African Americans comprise 56% of the parish population yet made up 88% of the average daily jail population in February 2025.

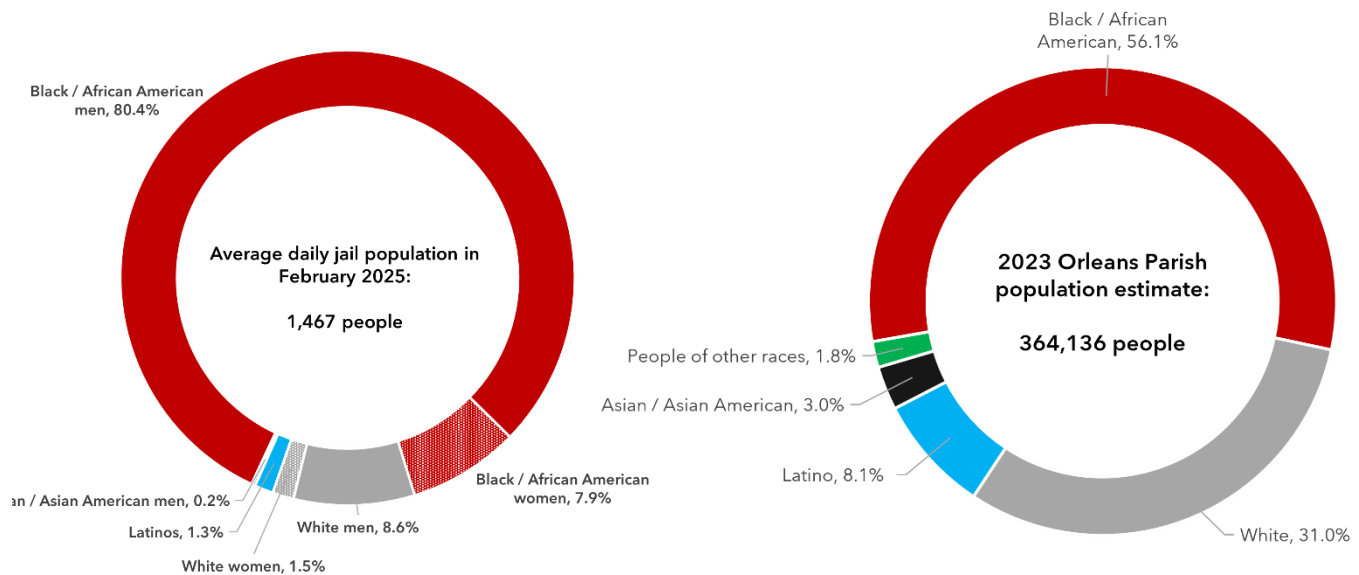

Figure 5 (above, at left). February 2025 average daily jail population by OPSO race categories and sex.

Figure 6 (above, at right). 2023 Orleans Parish population estimates by Census race/ethnicity categories. Source: US Census Bureau, 2023 American Community Survey data files.

## JAIL DETENTION RATE + RELATIVE RATE INDEX

Orleans Parish detained 402.8 people for every 100,000 parish residents in February 2025. The February jail detention rate is more than double the 2022 national jail incarceration rate of 199 people detained in jails per 100,000 US residents<sup>1</sup>.

Looking at the February 2025 jail detention rates by race, ‘wide’ disparities between racial groups become apparent. Black people were detained in the jail at nearly 5 times the rate of white people, per 100,000 New Orleans by race (relative rate index [RRI] = 4.8). For every 100,000 Black / African American New Orleanians, 721 Black people were in jail custody, on average, in February. For every 100,000 white New Orleanians, 149 white people were detained in the jail last month.

Figure 7. Relative rate index (RRI) for February 2025 jail detention rate per 100,000 Orleans Parish residents by race; RRI = .4.8.

### What do these measures tell us?

Jail detention rates (JDR) and relative rate indexes (RRI) give us a way to make comparisons between groups of different sizes. For example, we can use the JDR to compare how many people are in jail in Orleans Parish to how many people are detained in jails nationwide, even though the population of New Orleans is much smaller than the US population.

Relative rate indexes are commonly used to measure disparities. Typically, RRI is calculated as the rate of a historically disadvantaged group divided by the rate of the historically privileged group. An RRI greater than 1 strongly suggests that disparities exist. An RRI of 1 suggests that parity – the opposite of “disparity” – exists.

For more information about how we operationalize these terms, please see the glossary in Appendix B or on the OCJC website.

## FEBRUARY 2025 JAIL ADMISSIONS

688 people were admitted to the jail in February 2025. Jail admissions increased in February by 9.8% compared with January, when 627 people were admitted to the jail.

Figure 8. Jail admissions by most serious charge at booking, February 2024 - February 2025.

332 people were admitted to the jail in February with a felony charge as the most serious offense at booking, an increase of 13.3% compared with January, when 293 people were admitted to the jail with felony charges. As a proportion of all jail admissions, felony admissions decreased by 6 percentage points compared with January.

195 people were admitted to the jail in February with a state misdemeanor charge as the most serious charge at booking, a decrease of 8% compared with January, when 211 people were admitted to the jail with state misdemeanor charges as the most serious offense at booking. As a proportion of all jail admissions, state misdemeanor admissions increased by 1 percentage point.

586 of the 688 people – 85% – admitted to the jail in February 2025 had been arrested by a New Orleans Police Department officer. 12% of jail admissions were preceded by arrests by the Sheriff's Office; harbor, levee, and bridge law enforcement agencies; and other agencies such as campus police departments.

The Louisiana State Police (LSP), which expanded their patrol beyond the French Quarter in 2024, were credited with 18 arrests that preceded jail admissions in February, a decrease of 30% compared with 26 LSP arrests in January 2025.

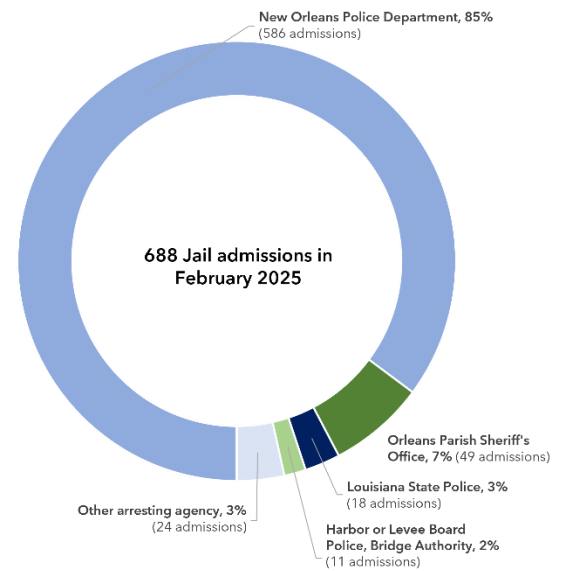

Figure 9. February 2025 jail admissions by arresting agency.

Over one-third of people admitted to the jail in February had been booked on violent felony or state misdemeanor charges (34%; 234 of the 688 jail admissions), an increase of 18% from January, when 218 people were admitted to the jail with violent offenses.

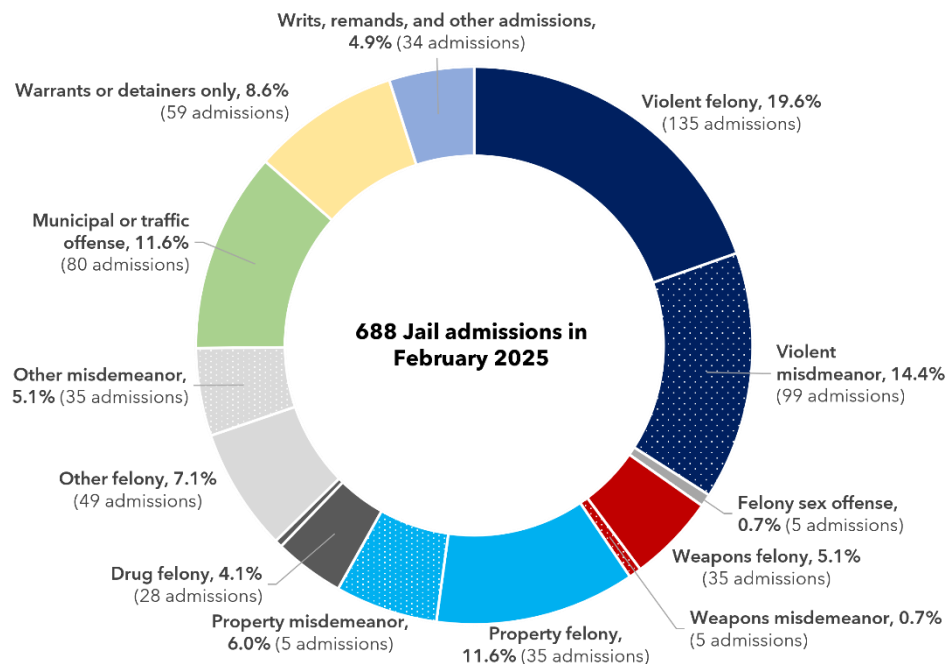

Figure 10. February 2025 jail admissions by most serious charge category at booking.

In February, 121 people were admitted to the jail with property offenses as the most serious charge at booking, an increase of 22% from the 99 admissions for property offenses in January.

Jail admissions in which weapons charges were the most serious offense continued to decrease since changes in concealed-carry laws came into effect in July 2024. In February, 40 people were admitted to the jail with weapons offenses as the most serious charge at booking, a nearly 25% decrease compared with January's 53 jail admissions.

## JAIL ADMISSION RATE + RELATIVE RATE INDEXES

In February, Orleans Parish admitted nearly 189 people into the jail for every 100,000 parish residents. Black people were admitted to the jail at a rate of 256 people per 100,000 African American parish residents, while white people were admitted at a rate of 117 people per 100,000 New Orleanians. Black people were admitted to the jail at over twice the rate of white people, per 100,000 Orleans Parish residents by rate (RRI = 2.2).

Figure 11. February 2025 relative rate index for jail admission rates per 100,000 Black and white Orleans Parish residents; RRI = 2.2.

Racial disparities are also apparent when looking at admission rates by the most serious charge category at booking.

In February 2025, Black people with weapons charges as the most serious offense made up 4.9% of the 688 jail admissions (34 people admitted to the jail); white people, 0.6% (4 people admitted to the jail).

Within each racial category, Black people with weapons charges made up 6.5% of the 524 African Americans admitted to the jail in February, while white people made up 3% of the 132 white people admitted to the jail last month. Stated another way: the admissions rate for Black people with felony or state misdemeanor weapons charges as the most serious offense at booking is 6.5 for every 100 Black people admitted to the jail. For white people, the admissions rate was 3 for every 100 white people admitted to the jail. Thus, the RRI for jail admissions on weapons charges in February was 2.1. (See Table 2, Appendix A.)

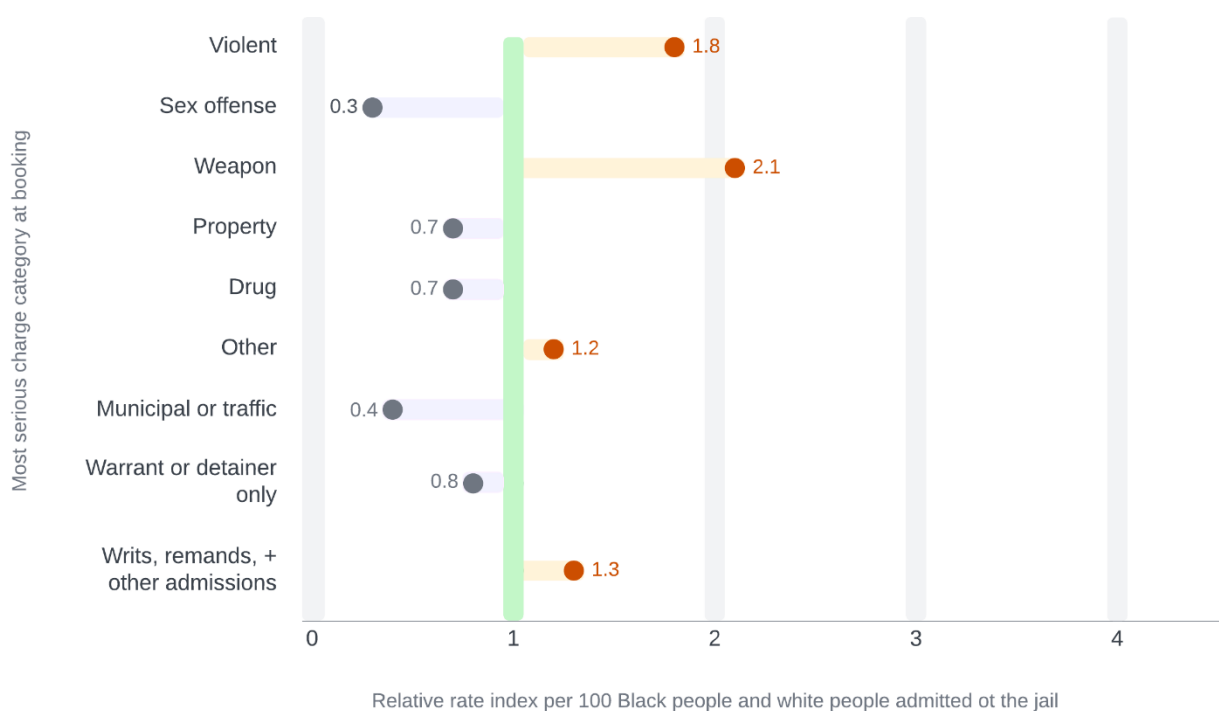

Figure 12. February 2025 relative rate indexes of jail admissions by most serious charge category per 100 jail admissions of Black people and white people.

## FEBRUARY 2025 JAIL RELEASES + AVERAGE LENGTH OF STAY

833 people were released from jail custody in February 2025, an increase of 33% from January, when 626 people were released from jail.

Jail releases occur when the Sheriff relinquishes custody of a detained person. A released person may have returned to their community or were transferred to the custody of another law enforcement agency or the Department of Corrections.

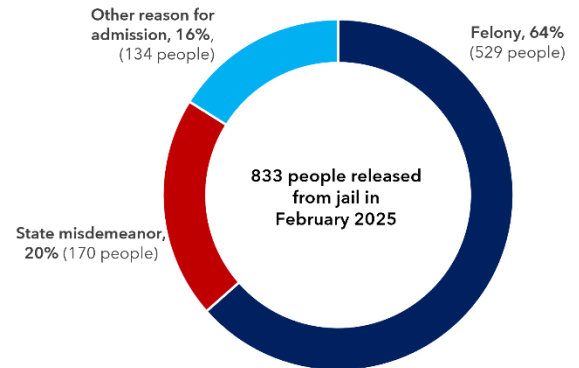

Figure 13. February 2025 jail releases by most serious charge category at booking.

The average length of stay for the 833 people who were released from jail last month was 65 days (min = less than 1 day; max = 1,272 days; standard dev. = 130.6; see Table 3, Appendix A.). The median length of stay for all released people in February was 5 days, an increase of 2 days from the January median. 57% of those released in February spent 13 days or fewer in jail.

Figure 14. Length of jail stay by most serious charge category at booking, February 2025. N = 833 people.

Nearly 64% of the 833 people who were released from jail in February had a felony charge as the most serious offense and spent an average of 91 days in custody; the median length of stay for this group was 22 days. People who were released in February having been booked with a state misdemeanor as the most serious charge at booking made up over 20% of all releasees and spent an average of 32 days in custody, with a median length of stay of 2 days. People booked only on warrants or detainers or admitted to the jail on other matters made up the remaining 16% of those released in February; this group spent an average of 6 days in custody and had had a median length of stay of less than one day.

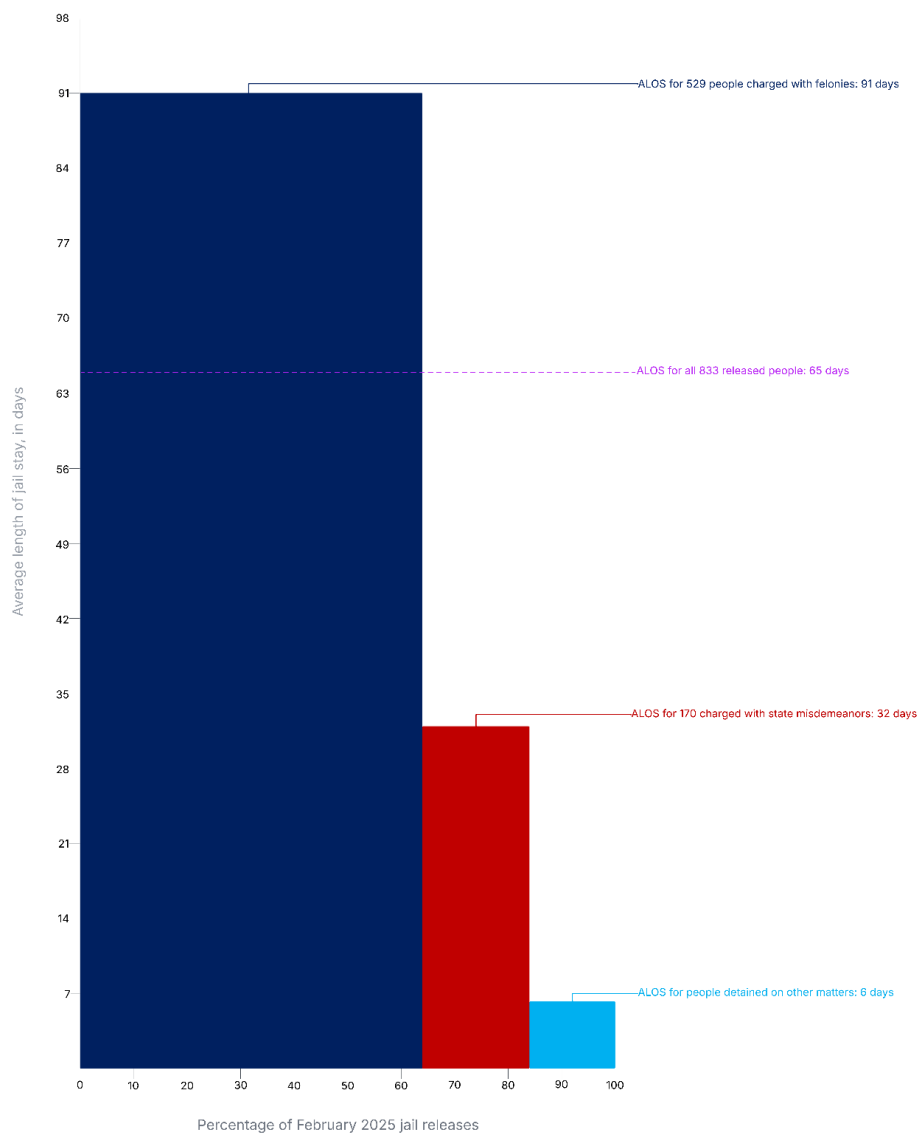

Figure 15. February 2025 average lengths of jail stay by most serious charge at booking.  
N = 833 people.

In February 2025, Black people who were released from jail spent 44 days longer in custody compared with white, Latino, Asian/Asian American people and people of “other” and “unknown” race. African Americans who were released from custody last month spent an average of 75 days in jail, while everyone else spent an average of 31 days in jail.

The average length of stay for Black releasees increased by 8 days in February, compared with January’s average length of stay. The difference in average length of jail stays between African Americans and everyone else increased by 1 day in February, compared with the previous month.

Figure 16. February 2025 average length of stay by race. N = 833 people.

## APPENDIX A: TABLES

*Table 1. February 2025 average daily jail population (ADP) by legal status (open and closed matters) and most serious charge at booking for people with open matters.*

<b>Legal status</b>	<b>ADP</b>	<b>% of ADP</b>
<i>Open matters by most serious charge at booking</i>	1,372	93.6%
Violent felony	755	51.5%
Felony sex offense	47	3.2%
Weapons felony	152	10.4%
Property felony	171	11.6%
Drug felony	31	2.1%
Other felony	61	4.2%
Violent misdemeanor	54	3.7%
Misdemeanor sex offense	2	0.1%
Weapons misdemeanor	3	0.2%
Property misdemeanor	17	1.2%
Drug misdemeanor	2	0.2%
Other misdemeanor	19	1.3%
Municipal or traffic violation	10	0.7%
Parole or probation violation	40	2.7%
<i>Other reason for admission or missing information</i>	12	0.8%
<i>Sentenced by agency</i>	90	6.2%
Louisiana Department of Corrections	55	3.8%
East Louisiana Mental Health System	35	2.4%
<b>Total</b>	<b>1,467</b>	<b>100%</b>

*Note: Percent totals may slightly exceed 100% due to rounding.*

Table 2. February 2025 jail admissions by race and most serious charge category at booking.

Charge category	Black	White	Everyone else	Total
Violent	198	27	9	234
Sex offense	2	2	1	5
Weapons	34	4	2	40
Property	85	31	5	121
Drugs	23	8	0	31
Other	69	14	1	84
Muni + traffic	44	27	9	80
Warrants only + LAPP only	43	14	2	59
Other jail admissions	26	5	3	34
<b>Total</b>	<b>524</b>	<b>132</b>	<b>32</b>	<b>688</b>

Table 3. February 2025 average length of jail stay (ALOS) by most serious charge category at booking.

Charge category	ALOS, in days	Median LOS, in days	Max LOS	Standard dev.	N
Felony	91	22	1,272	153.2	529
State misdemeanor	32	22	416	65.3	170
Other charge or matter	6	> 1	186	21.8	134
All people released in February	65	5	1,272	130.6	833

## APPENDIX B: GLOSSARY

### Criminal legal system definitions

**AVERAGE MONTHLY JAIL POPULATION.** The sum of all the daily detainee counts divided by the number of days in the month. We use an average, rather than a population snapshot (i.e. the daily count on a single day of the month) so that we can report one figure that takes into consideration all the daily counts and day-to-day fluctuations in jail population during the month. In monthly reports, we contextualize the average monthly jail population by reporting the minimum and maximum daily populations and the standard deviation for all daily jail counts in the month.

**JAIL ADMISSIONS.** We acknowledge that the term, *jail admission*, may be defined differently in correctional, pretrial, and other spaces. Here, we define jail admissions as the transfer of custody from an arresting agency to the Orleans Parish Sheriff's Office following custodial arrests that occurred outside of the jail. Certainly, people can be and are booked on new charges after admission to the jail (for example, for offenses that can only take place within a jail, such as battery of a correctional officer). Our tabulations and analyses only count the initial booking that brought a person from the community into the jail, consistent with the central aims of the report.

**JAIL RELEASES.** A person's exit from jail custody. Note that the term, *releases*, can refer to releases back into the community (for example, when someone is released on their own recognizance or posts bond); releases to another jurisdiction's law enforcement agency (for example, in the case of someone admitted to the jail on an out-of-state warrant); or releases to the Department of Corrections after sentencing.

**LENGTH OF JAIL STAY.** The difference, in days, between the date of jail admission and the date of jail release. Note that the length of stay is only calculated for people who have been released from jail to ensure a final, static figure.

**AVERAGE LENGTH OF STAY.** The mean of all jail stays for people released during the month, calculated as the sum of all lengths of stay for people released during the month divided by the number of people released during the same month. To contextualize our reporting of the average length of stay, we also report the shortest lengths of stay (i.e. the minimum; usually less than 1 day); the longest length of stay (i.e. the maximum); and the standard deviation for all lengths of stay for people released during the month.

**MEDIAN LENGTH OF STAY.** When a released person has been released from jail custody after a very long jail stay, that person's length of stay can skew the average length of stay upward. We report the median length of stay, the midway point between all observed lengths of jail stays for people released during the month, to provide additional context for interpreting average length of stay. For a given median length of stay, 50% of those released had a length of stay longer than the median.

## Criminal legal system definitions, continued

**MOST SERIOUS CHARGE AT BOOKING** People detained in jail can have more than one charge at more than one level of seriousness. For example, a detained person may have been booked with a felony property charge, state misdemeanor drug charge, while also having an outstanding local warrant. We created “most serious charge at booking” so that we can name the highest-level charge for which a person is being detained. We use a hierarchy of charge categories to determine the most serious charge at booking. In the hierarchy, all charges are categorized into four types: 1) felonies; 2) state misdemeanors; 3) municipal and traffic offenses; 4) warrants, attachments, and Louisiana parole and probation detainers. All felonies are more serious than state misdemeanors, and within the felony and state misdemeanor categories is a sub-hierarchy of offense types, listed here in order of seriousness: a) violent offenses; b) sex offenses; c) weapons offenses; d) property offenses; e) drug offenses; and f) ‘other’ offenses.

**AVERAGE 7-DAY JAIL TURNOVER RATE.** A measure “borrowed” from the Bureau of Justice Statistics, the average 7-day jail turnover rate aims to capture in broad terms the movement of people into and out of the jail. We calculate the jail turnover rate by dividing the average daily population for the month by the sum of jail admissions and jail releases, multiplying by 7, and dividing by the number of days in the month.

## Definitions based on OPSO variables

**“LEGAL STATUS”, “OPEN”, AND “CLOSED” MATTERS.** “Legal status” is a designation used by the Sheriff to categorize people detained in the jail. There are two types of legal-status designations. People with “open” matters had, at the time of reporting, had cases that had not yet reached a final disposition. People with open matters may also have had active warrants and/or detainers at the time of reporting. Inversely, people with “closed” matters have cases that have reached a final disposition, and any warrants and/or detainers they may have had have been resolved. People with closed matters have been sentenced to a Department of Corrections institution or to the Eastern Louisiana Mental Health System and were, at the time of reporting, awaiting transport to those facilities.

Note that these are designations originate from the Sheriff, for the purpose of categorizing people detained in the jail. *Any reporting of frequencies or percentages involving these categories should not be interpreted as measures related to Court activities.*

**ARRESTING AGENCY.** We report monthly jail admissions by arresting agency in response to inquiries about possible effects of increased Louisiana State Police patrols beyond the French Quarter. The Sheriff collects “arresting agency” data for every person admitted to the jail, and we tabulate this variable to generate a data graphic that appears in the monthly report. *As this variable specifically relates to jail admissions, our reporting on arresting agency should not be interpreted as a measure of law enforcement activities.*

## How we operationalize measures of inequality

**DISPROPORTIONALITY AND OVER- AND UNDERREPRESENTATION.** We use these terms to compare the demographic characteristics of a group (like people detained in the jail) to the demographic characteristics of the larger community from which most of that group came (like Orleans Parish). When both groups share similar proportions of people by demographic characteristics, we observe proportionality. We observe disproportionality when one demographic group is overrepresented or is underrepresented, in comparison with the demographic characteristics of Orleans Parish.

**DISPARITY.** We use the term, disparity, to refer to differences in the rates at which something occurs among 2 or more groups. To explore the possibility of disparity in our jail population reports, we first calculate the rate of jail detention per 100,000 New Orleans residents by race/ethnicity. The jail detention rate is the average jail population for a group (say, Black people detained in the jail during the month) divided by the estimated number of Black people in New Orleans, then multiplied by 100,000. Generating a rate per 100,000 is useful when comparing rates between groups of differing sizes (for example, the population of New Orleans, a majority [58%] African American city), we can “control” for the differences in size by comparing rates per 100,000 residents.

Further, we can “relate” the jail detention rate for Black people with that of white people to generate a relative rate index (RRI). To do this, we divide the Black jail detention rate per 100,000 Black people in New Orleans by the jail detention rate for white people per 100,000 residents. By using the white rate as the denominator in the calculation, we effectively index the white rate to 1 and defensibly make the statement that, in December 2023 (for example), Black people were jailed at a rate 4.8 times that of white people. We observe parity – a measure of equality – when the RRI = 1.

### *Notes about race / ethnicity categories*

Our reporting on racial and ethnic demographics of people detained in the jail is based on data collected by Orleans Parish Sheriff’s Office (OPSO) deputies during the jail admission process. OPSO uses the following mutually exclusive categories for race: Black; White; Hispanic; Asian; American Indian; and Unknown. The race and ethnicity categories currently in use by OPSO do not quite align with those used by the US Census Bureau, which defines race and ethnicity as separate constructs.

Our reporting is rooted in an understanding that the inequalities that we observe are reflections and symptoms of systemically racist systems. We view mass incarceration in the US as the cumulative effects of systemic racism that impact everyone’s lives before any one person is ever booked into jail. Accordingly, our reporting about racial disproportionalities should not be interpreted as critiques of Black people or Black culture; nor should it be interpreted as evidence to support detention of more white people to reduce inequalities.

One thing to keep in mind: we use these measures and categories as a kind of shorthand to describe inequalities, but they certainly don’t tell the whole story. Race – like other categories like gender – is a broad social construct that is shaped by history and contains other constructs, like socio-economic status and access to essentials such as education and health care. Accordingly, the purpose of the sections is to highlight some observed areas of inequality, in the hope that it sparks continued conversation about how to make our community more just and equitable.
