

Orleans Parish Jail Population by the numbers

A monthly report produced by the Mayor's Office of Criminal Justice Coordination

June 2024

Purpose

This report aims to address two broad questions: "Who was detained in the Orleans Justice Center last month?" and "What was the flow of people into and out of the jail last month. To that end, the report presents information about average daily jail population, admissions, and releases over the past month.

Data sources

The data behind the graphics comes from the **Orleans Parish Sheriff's Office** and the **Orleans Parish Criminal District Court** via the OCJC Data Warehouse. OCJC undertakes additional data processing to better enable tabulations and analyses.

Summary

- On average, **1,325 people were detained in the jail daily in June 2024.**
 - A nearly 5% increase from the average daily jail population of 1,267 people in May 2024.
 - A 22% increase compared to June 2023, when 1,084 people, on average, were detained in the jail,
- **810 people were admitted to the jail in June**, a 7% increase compared to May, when 754 people were admitted to the jail. Over half – 56%, or 452 people – admitted to the jail last month had a new felony as the most serious charge at booking.
- **739 people were released from the jail in June**, a 5% increase from May when 692 people were released from jail custody.
- **The average length of stay for the 739 people released from the jail in June was 58 days** (min = less than 1 day; max = 3,283 days; standard dev. = 209.8).
 - The median length of stay for all people released in June was 2 days, the same as May 's median.
 - 387 people (52%) were released from jail within 2 days of admission.
 - People who were released more than 2 days after admission had an average jail stay of 101 days (n = 352 people; min = 3 days; standard dev. = 291.4) and a median length of stay of 28 days.
- Racial disparities persist in the jail population. In June 2024, **Black people were detained in the jail at 4.6 times the rate of white people**, per 100,000 New Orleans residents by race.
 - The June jail detention rate for Black people was 531 Black detainees per 100,000 Black residents, compared with the white rate of 116 white detainees per 100,000 white residents.
 - The June jail detention rate for all New Orleanians was 352 detained people per 100,000 residents.

The average monthly jail population in June 2024 was 1,325 people (standard dev. = 19.4), a 4.6% increase from May, when the average jail population was 1,267 people. The average monthly population has increased by 22% compared to June 2023, when, on average 1,084 people were detained in the jail.

Figure 1. Historical trends in average jail population, monthly admissions, monthly releases, and 7-day average turnover rates, June 2023 - June 2024

The 7-day average jail turnover rate for June 2024 was 27%. The jail turnover rate is a ratio of jail admissions and release to the average daily population; it measures the “flow” of people into and out of the jail. On average, over 1 out of 4 people detained during a 7-day period in June were newly admitted to or about to be released from custody. June’s jail turnover rate was 1 percentage point higher than May’s rate. The Bureau of Justice Statistics estimates that in 2022 (the most recent year for which data are available), the national average weekly turnover rate for jails of our size was 31%.

The lowest daily jail population was on June 1st, when 1,292 people were detained in the jail. The daily jail population hit its peak on June 24th, when 1,361 were detained in the jail. 1,362 people were in jail custody on the last day of the month.

Daily jail admissions varied daily in June (daily average = 27 admissions; standard dev. = 6.0) and reached a peak on June 12th, when 37 people were admitted to the jail. 20 people were admitted on the last day in June. In all, 810 people were admitted to the jail last month.

Jail releases fluctuated more widely than jail admissions in June (daily average = 25 releases; standard dev. = 11.6). On June 11th, 50 people were released from the jail, the largest number of releases during the month. 13 people were released from the jail on the last day of the month. In all, 739 people were released from jail in June 2024.

Most people in jail custody in June – 92%, on average – were detained on open matters. By “open matters”, we’re referring to people whose court cases have not yet reached their final disposition and those who were admitted to the jail with open warrants and/or probation or parole detainers only.

Figure 2. Daily population by legal status; jail admissions; and jail releases, June 2024

10% of the average daily jail population – about 107 people in custody each day in June – comprised detained people with closed matters. By “closed matters”, we mean that at least one case associated with their current jail stay has reached its final disposition. Included in this group are people who have been sentenced to the Department of Corrections or the Eastern Louisiana Mental Health System and are awaiting transport to those facilities.

Focus on racial equity: Overrepresentation and disparity in jail detention

Black people are overrepresented in the jail population

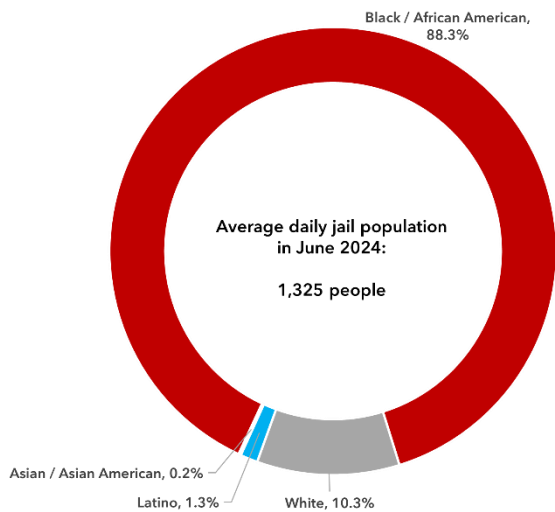

Figure 3. Average daily population by race/ethnicity, June 2024.

Figure 4. New Orleans population estimate, 2021. Source: Summary Files, 2021 American Community Survey, US Census Bureau.

New Orleans is a majority-Black city, yet African Americans remain overrepresented in the average jail population. In June, Black/African American people comprised 88% of the average daily jail population. In comparison, Black people are 59% of the New Orleans population, based on 2021 Census estimates.

If Black people are disproportionately represented in the average jail population, white people are under-represented in the jail population. In June, white people made up 10% of the average jail population, while making up 31% of the New Orleans population, based on 2021 Census estimates.

For more about how we define *overrepresentation*, please see the Glossary at the end of the report.

'Wide' disparities exist in jail detention rates

Even when we control for the difference in population sizes of Black and white New Orleans residents, we find that, per 100,000 New Orleanians by race, **Black people are detained in the jail at nearly five times the rate of white people (RRI = 4.6)**. For every 100,000 Black/African American New Orleanians, 531 Black people were in detained in June 2024; for every 100,000 white New Orleanians, 116 white people were in jail custody.

Over 4 Black people were detained in the jail...

810 Jail admissions in June 2024

Figure 6. Jail admissions by most serious charge category at booking, June 2023 – June 2024. Note that “Other” admissions include people booked into the jail for warrants or detainers only; people remanded to jail custody by the Court; and people brought to the jail on writs.

810 were people admitted to the jail in June 2024, a 7% increase from May, when 754 people were admitted to the jail. Over half – nearly 56%, or 452 people – admitted to the jail last month had a new felony as the most serious charge at booking, and nearly 24% – 191 people – were admitted to jail with a new state misdemeanor as the most serious charge at booking.

Most people who were admitted to the jail in June – 76%, or 570 out of the 754 jail admissions – had been arrested by NOPD officers.

Louisiana State Police, which earlier this year expanded their presence in the city beyond patrolling the French Quarter, arrested 3%, or 22 people, admitted to the jail in June.

In previous months, OCJC reported around 8% of monthly jail admissions had incomplete or missing arresting agency data. We have updated our processes and will report revised figures for February through May 2024 in a future report.

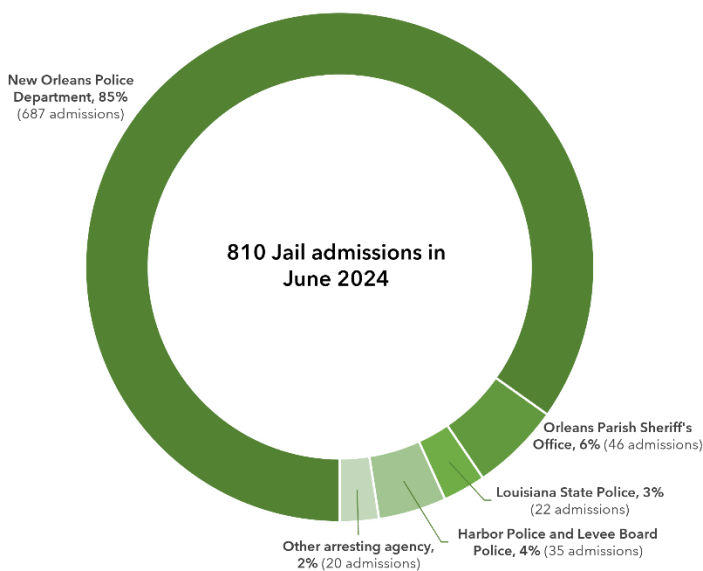

Figure 7. June 2024 jail admissions by arresting officer's agency. Note that “Other arresting agency” June include campus police departments, HANO police, and LA Probation & Parole.

Figure 8. Felony and state misdemeanor jail admissions by most serious charge category at admission, June 2024. No one was admitted with a misdemeanor sex offense as the most serious charge at admission in June.

Nearly 8 out of 10 jail admissions in June 2024 – 643 people out of the 810 people admitted in June – were for felonies or state misdemeanors. 452 people were admitted to the jail with felony charges, and 191 people were admitted to the jail with state misdemeanor charges.

The proportion of people admitted on felony offenses increased by over 3 percentage points in June compared to May, when felony admissions accounted for 395 of the 595 jail admissions.

The proportion of people admitted with state misdemeanors as the most serious charge at admission decreased by almost 3 percentage points in June compared to May, when misdemeanors comprised 200 of the 595 admissions on felony or state misdemeanor charges.

People admitted to the jail with violent felonies and misdemeanors made up the plurality – 45% – of jail admissions in June, continuing a trend observed since June 2023.

Figure 9. Historical trends in jail admissions by most serious charge category at admission, June 2023 - June 2024.

Domestic violence and intimate partner violence offenses comprise the plurality – 45.3% – of all violent charges at jail admission in June 2024. 181 people were admitted to the jail on 244 violent felony charges; of the violent felony charges, 35% were for domestic violence and intimate partner violence offenses.

While 107 people were admitted to the jail in June with a violent misdemeanor as the most serious charge at admission, a total of 138 people were admitted to the jail on 213 violent misdemeanor charges. Of the violent misdemeanor charges, 57% were for domestic and interpersonal violence offenses.

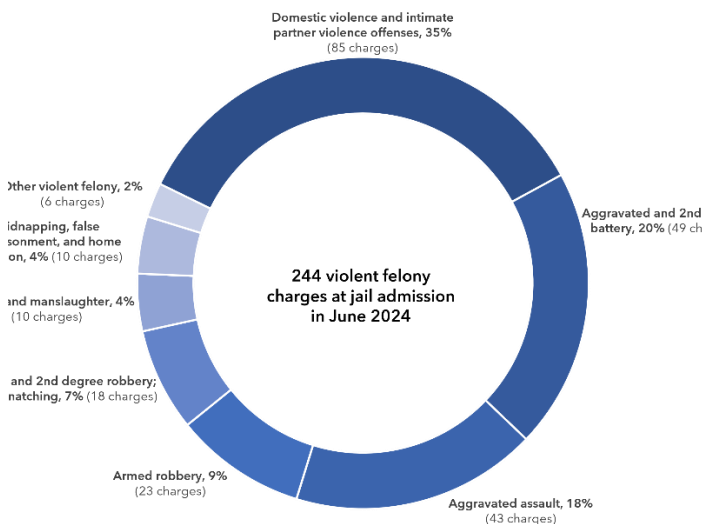

Figure 10. Charges for the 181 people admitted to the jail with violent felonies in June 2024.

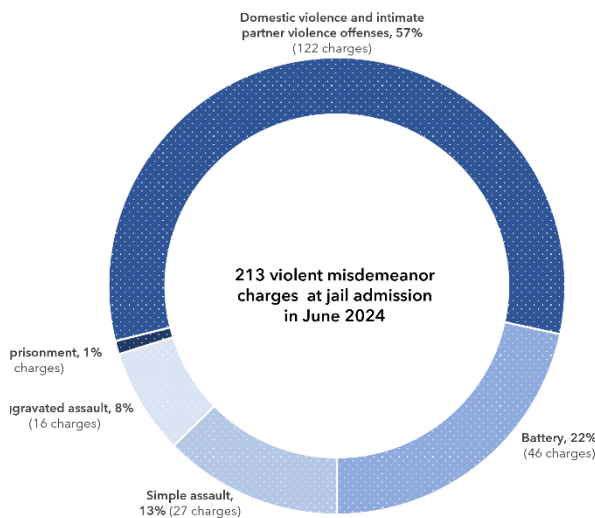

Figure 11. Charges for the 138 people admitted to the jail with misdemeanor violence charges in June 2024. Note that of the 138 people, 107 had a violent misdemeanor as the most serious charge at admission, and 31 had a felony-level offense as the most serious charge at booking.

Focus on racial equity: Disparity in jail admission

Disparities by race in jail admissions persisted in June 2024. **Black people were admitted to the jail at nearly 3 times the rate of white people for every 100,000 New Orleans by race (RRI = 2.9).** Overall, New Orleans admitted 352 people into the jail for every 100,000 parish residents in June 2024. When we compare jail admission rates by race, we find that, in June, 531 Black people were booked into the jail for every 100,000 Black New Orleanians, and 116 white people were admitted to the jail for every 100,000 white New Orleanians.

For nearly every 3 Black people admitted to the jail...

per 100,000 Black New Orleanians

...One white person was admitted to the jail

per 100,000 white New Orleanians

Figure 12. Relative rate index, jail admission rate per 100,000 New Orleans residents by race, June 2024. Population estimates are from the 2021 American Community Survey, Summary File 4, US Census Bureau.

Focus on racial equity: Disparity in jail admission for weapons charges

Black people were admitted to the jail on weapons charges at over 7 times rate of white people in June (RRI = 7.4).

For every 100 Black people booked into the jail, over 12 have a weapons offense, compared to over nearly 2 white people for every 100 white people booked into the jail.

The June RRI for jail admissions on weapons charges is practically unchanged from May, when it nearly doubled to 7.6 compared to the April 2024 RRI of 3.9 (9.5 Black people were admitted on weapons charges for every 100 Black people admitted to the jail, and 1.6 white people were admitted on weapons charges for every 100 white people admitted to the jail). The disparity persists in spite of admissions for weapons charges as the most serious offense at booking generally have been trending downward since October 2023.

For every 7 Black people admitted to the jail with a weapons charge as the most serious offense..

per 100 Black people admitted to the jail

One white person is admitted to the jail with a weapons charge as the most serious offense.

per 100 white people admitted to the jail

Figure 13. Relative rate index, jail admissions for which weapons charges were the most serious charge at booking per 100 jail admissions by race, June 2024

739 Jail releases and an average length of stay of 58 days in June 2024

Figure 14. Jail releases by length of stay, in days, and most serious charge type at admission, June 2024, N = 739

The median length of stay for the 739 people released from jail in June was 2 days, the same as May’s median (average = 58 days; min = less than one day; max = 3,283 days; standard dev. = 209.8).

52% of the people released in June stayed in jail for 2 days or fewer. The 352 people who stayed in jail for 3 or more days had an average length of stay of 120 days and a median length of stay of 28 days (standard dev. = 291.4).

69% – 513 of the 739 people released from jail – had been admitted to the jail with at least one felony offense at admission and had an average length of stay of 76 days (median = 4 days; min = less than 1 day; standard dev. = 246.7).

149 people (20% of all people released in June) had at least one state misdemeanor as the most serious charge at admission and stayed in jail, on average, for 21 days (median = 1 day; min = less than 1 day; max = 323 days; standard dev. = 65.3).

10% of those who were released in June (77 people) had been admitted to the jail for warrants or detainers only; municipal or traffic offenses; on writs; or were remanded to the jail by the Court. On average, this group of released people stayed in jail for an average of 8 days (median = less than one day; max = 323 days; standard dev. = 37.6).

Focus on racial equity: Disparity in lengths of stay

In June 2024, the 606 African American people released from the jail spent an average of 63 days in jail – 30 days longer than the average length of stay of 34 days for 134 white and Latino people released from jail last month. No Asian/Asian American person was released from jail in June 2024.

Compared to May 2024, the average length of stay for Black people who were released from jail has increased by 7 days, and the length of stay for white releasees has increased by 17 days. The disparity between lengths of stay for Black releasees and white, Latino, and Asian/Asian American released people remained the same in June compared to May.

Figure 15. Average length of jail stays by race, June 2024, N = 739 released detainees. Note that one person with “unknown” or missing race data was released from jail last month; this person’s length of jail stay is excluded from the graphic but included in the average length of stay calculation for white and Latino released people.

Glossary of terms and technical notes

Criminal legal system definitions

Average monthly jail population. The sum of all the daily detainee counts divided by the number of days in the month. We use an average, rather than a snapshot (the jail population on a single day of the month which represents the jail population for the month) so that we can report one figure that takes into consideration the fluctuations in jail population during the month.

Jail admissions. We acknowledge that the term, *jail admission*, June be defined differently in correctional, pretrial, and other spaces. Here, we define jail admissions as bookings into the jail from the community; that is, jail admissions resulting from custodial arrests that occurred outside of the jail. Certainly, people can be and are booked on new charges after admission to the jail (for example, for offenses that can only take place within a jail, such as battery of a correctional officer), our tabulations and analyses only consider bookings that brought a person from the community into the jail, consistent with the central aims of the report.

Jail releases. A person's exit from jail custody. Note that 'releases' can refer to releases back into the community (for example, when someone is released on their own recognizance or posts bond); release to another jurisdiction's law enforcement agency (for example, in the case of someone admitted to the jail on an out-of-state warrant); or release to the Department of Corrections after sentencing.

Length of jail stay. The difference, in days, between the date of jail admission and the date of jail release. Note that the length of stay is only calculated for people who have been released from jail to ensure a final, static figure.

Average length of stay. The mean of all jail stays for people released during the month, calculated as the sum of all lengths of stay divided by the number of people released.

Most serious charge at booking. We use a hierarchy of charge categories to determine the most serious charge at booking. In the hierarchy, all charges are categorized into four types: 1) felonies; 2) state misdemeanors; 3) municipal and traffic offenses; 4) warrants, attachments, and Louisiana parole and probation detainers. All felonies are more serious than state misdemeanors, and within the felony and state misdemeanor categories is a sub-hierarchy of offense types, listed here in order of seriousness: a) violent offenses; b) sex offenses; c) weapons offenses; d) property offenses; e) drug offenses; and f) 'other' offenses.

Average 7-day jail turnover rate: A measure "borrowed" from the Bureau of Justice Statistics, the average 7-day jail turnover rate aims to capture in broad terms the movement of people into and out of the jail. We calculate the jail turnover rate by dividing the average daily population for the month by the sum of jail admissions and jail releases, multiplying by 7, and dividing by the number of days in the month.

How we operationalize measures of inequality

Disproportionality and over- and underrepresentation. We use these terms to compare the demographic characteristics of a group (like people detained in the jail) to the demographic characteristics of the larger community from which most on that group came (like Orleans Parish). When both groups share similar proportions of people by demographic characteristics, we observe **proportionality**. We observe **disproportionality** when one demographic group -- for example, Black people or white people detained in the jail--is **overrepresented** (in the case of Black people in the jail) or is **underrepresented**, in comparison with the demographic characteristics of Orleans Parish.

Glossary: How we operationalize measures of inequality, continued

Disparity. We use the term, *disparity*, to refer to differences in the rates at which something occurs among 2 or more groups. To explore the possibility of disparity in our jail population reports, we first calculate the **rate of jail detention per 100,000** New Orleans residents by race/ethnicity. The jail detention rate is the average jail population for a group (say, Black people detained in the jail during the month) divided by the estimated number of Black people in New Orleans, then multiplied by 100,000. Generating a rate per 100,000 is useful when comparing rates between groups of differing sizes (for example, the population of New Orleans, a majority [58%] African-American city), we can “control” for the differences in size by comparing rates per 100,000 residents.

Further, we can “relate” the jail detention rate for Black people with that of white people to generate a **relative rate index (RRI)**. To do this, we divide the Black jail detention rate per 100,000 Black people in New Orleans by the jail detention rate for white people per 100,000 residents. By using the white rate as the denominator in the calculation, we effectively index the white rate to 1 and defensibly make the statement that, in August 2023 (for example), Black people were jailed at a rate 4.8 times that of white people. We observe parity – a measure of equality – when the RRI = 1.

Notes about race / ethnicity categories

Our reporting on racial and ethnic demographics of people detained in the jail is based on data collected by Orleans Parish Sheriff’s Office (OPSO) deputies during the jail admission process. OPSO uses the following mutually exclusive categories for race: Black; White; Hispanic; Asian; American Indian; and Unknown. The race and ethnicity categories currently in use by OPSO do not quite align with those used by the US Census Bureau, which defines race and ethnicity as separate constructs.

Our reporting is rooted in an understanding that the inequalities that we observe are reflections and symptoms of systemically racist systems. We view mass incarceration in the US as the cumulative effects of systemic racism that impact everyone’s lives before any one person is ever booked into jail. Accordingly, our reporting about racial disproportionalities should not be interpreted as critiques of Black people or Black culture; nor should it be interpreted as evidence to support detention of more white people to reduce inequalities.

One thing to keep in mind: we use these measures and categories as a kind of shorthand to describe inequalities, but they certainly don’t tell the whole story. Race – like other categories like gender -- is a broad social construct that is shaped by history and contains other constructs, like socio-economic status and access to essentials such as education and health care. Accordingly, the purpose of the sections is to highlight some observed areas of inequality, in the hope that it sparks continued conversation about how to make our community more just and equitable.

We welcome your feedback and questions!

As a stakeholder, have you noticed something and wondered if data exists to confirm your observations? At OCJC, we are interested in your observations and data questions. Please reach out to Adrienne Tobler at adrienne.tobler@nola.gov to further discuss the possibility of exploring your questions.

For technical questions, please contact Theresa McKinney at theresa.mckinney@nola.gov.
